SUMMARY

A full stack javaScript developer with many years of experience in developing and maintaining business applications.

EXPERIENCE

Software Engineer | Backtrace – Remote – Aug 2021 - PRESENT

Built new features and workflow integrations for the Backtrace's application monitoring and crash reporting software. My main focus was on the front-end application utilizing reasonML's type safe language leveraging javascript and OCaml ecosystems alongside ReasonReact and Rescript.

Full Stack Developer | Own A Car – Fresno, CA – JAN 2018 - AUG 2021

Inventory Program: Developed an inventory tracking application that helped **improve productivity** of the dealership's weekly inventory checks by **50%**. The application allows the user to scan VIN barcodes marking the vehicle accounted for at a specific location and removing that vehicle from the remaining list of vehicles that need to be scanned.
Frontend: React, HTML, CSS (displaying data, implementing validation, and attaching location information)
Backend: PHP (performing CRUD operations and validation)
Database:MySQL (stored car inventory data and locations).

Dealership Website: Designed dealership website that displayed cars and allowed customers to fill out sales forms.
Frontend: React, CSS (with page pagination, filters, and form validation).
Backend: PHP (to perform CRUD operations on the database).
Database: MySQL (stored car inventory data).

EDUCATION

Computer Science Degree
Clovis Community College

Full Stack JavaScript Bootcamp
Treehouse Techdegree

SKILLS

MERN Stack
- MongoDB
- Express
- React
- Node.js

Frontend
- React
- ReasonML
- ReasonReact
- ReScript
- Next.js

Backend
- Node.js
- Express
- Rest API
- NPM
- PHP

Web Dev
- JavaScript
- HTML
- CSS
- JQuery

Databases & Cloud
- MongoDB
- SQL
- Sequelize
- Firebase

Version Control & IDE
- Git
- GitHub
- VScode
